**Professore:** Lei ha una qualche ambizione?

**Nicola:** Ma... Non...

**Professore:** E Allora vada via... Se ne vada dall'Italia. Lasci l'Italia finché è in tempo. Cosa vuole fare, il chirurgo?

**Nicola:** Non lo so, non ho ancora deciso...

**Professore:** Qualsiasi cosa decida, vada a studiare a Londra, a Parigi... Vada in America, se ha le possibilità, ma lasci questo Paese. L'Italia è un Paese da distruggere: un posto bello e inutile, destinato a morire.

**Nicola:** Cioè, secondo lei tra poco ci sarà un'apocalisse?

**Professore:** E magari ci fosse, almeno saremmo tutti costretti a ricostruire... Invece qui rimane tutto immobile, uguale, in mano ai dinosauri. Dia retta, vada via...

<sup>46</sup>  
<sup>47</sup> **Introduction**

---

# The ATLAS experiment at the Large Hadron Collider

---

The analysis presented in this dissertation has been performed analyzing data from proton-proton (p-p) collisions at the center of mass energy (cme)  $\sqrt{s} = 8$  TeV recorded during the year 2012 at the ATLAS experiment. In the following Chapter we will briefly describe the main features of the detector.

# Going beyond the Standard Model

---

57

58

59     The Standard Model (SM) of particle physics is the most successful, beautiful and  
60     precise theory describing the interactions between fundamental particles. Its validity has  
61     been tested by precision measurements at the Large Electron-Positron Collider (LEP) at  
62     CERN and confirmed by the observation of all the particles it predicts, including the Higgs-  
63     like boson discovered at the Large Hadron Collider (LHC) in July of 2012 which up to now  
64     behaves as expected from the SM.

65     What makes the SM “only” and effective theory is the fact that unstabilities appear at  
66     high energy scales of the order of the Planck mass. In this Chapter we will show

## 67   2.1   Building the Standard Model

## 68   2.2   New Physics Models predicting vector-like quarks

69     [\[1, 2\]](#)

# Objects reconstruction

---

## 3.1 Electrons

## 3.2 Muons

## 3.3 Jets

## 3.4 Missing Transverse Energy

# Monte Carlo simulation

---

80 **4.1 Parton shower**

81 **4.2 Hadronization**

82 **4.3 Underlying-event**

83 **4.4 Generators**

# Search for vector-like top partners pairs decaying to $Wb + X$

---

## 5.1 Data sample

## 5.2 Monte Carlo simulated samples

### 5.2.1 SM processes

### 5.2.2 Signal samples

## 5.3 Multi-jet background

## 5.4 Object definition

### 5.4.1 Boosted $W$ reconstruction

## 5.5 Control regions

## 5.6 Event selection

## 5.7

## 5.8

## 5.9

# 101 Statistical treatment and Results

---

## 103 6.1 The $\text{CL}_s$ method

## 104 6.2 Systematics

## 105 6.3 Results

106

# Conclusions

107

---

113 **Search for  $T\bar{T} \rightarrow Wb+X$  at  $\sqrt{7}$  TeV**  
114 

---

116 Preliminary search for  $T\bar{T} \rightarrow Ht +$   
117  $X$
